

AI Hack Code

Build Apps & Automate Your Life.

A guide from general prompting to more efficient development.

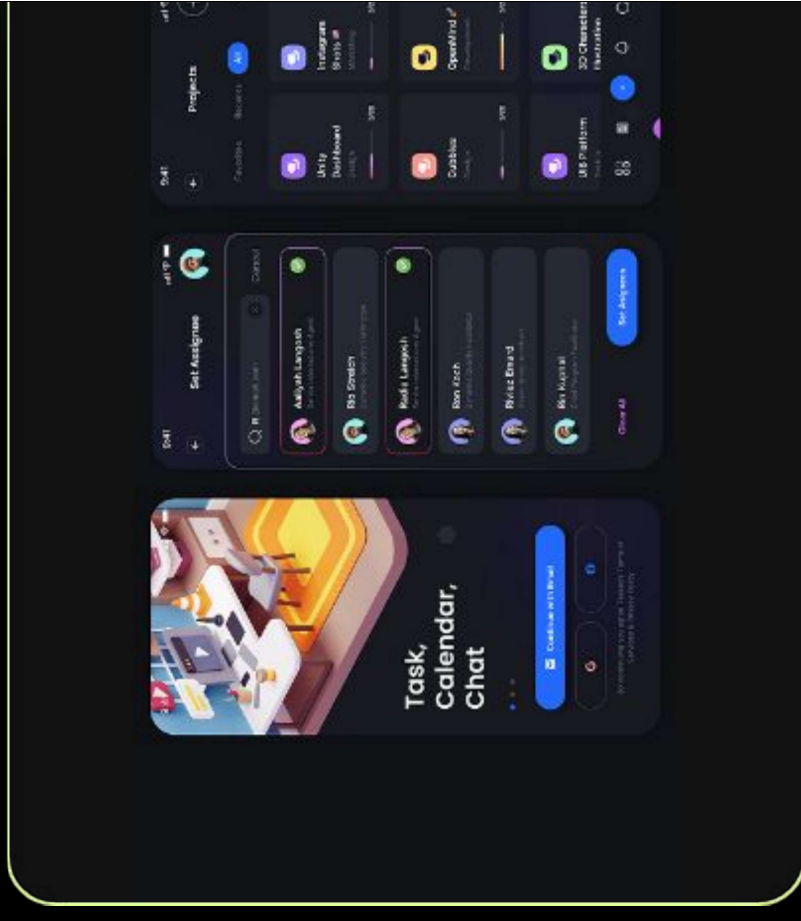

Section 1: The AI Cheat Code

Mastering the art of communication with the machine.

Part 1: The Magic Trick

No Experience Required

- Witness the "Aesthetic Study Buddy" app built in real-time.
- See how AI handles the UI, Logic, and Features.
- Learn the secret: Coding is now about logic, not syntax.

Modular Prompting Framework

Context

Define the persona and the background situation clearly.

Task

State the specific objective you want the AI to achieve.

Constraints

Apply rules and boundaries (e.g., "No bullet points").

Format

Specify the output format (e.g., JSON, Code, or Po

The RTF Framework

Role, Task, Format

Role: "Act as a Senior Flutter Developer..."

Task: "Create a clean Pomodoro timer widget..."

Format: "Return only the Dart code block."

Why it Works

This simple structure reduces hallucinations, forces the AI to focus on the specific expertise required for the job.

Custom Instructions

Permanent Context: Set your "About Me" once and never repeat your preferences again.

Style Profiles: Force the AI to always respond in a concise, technical, etc.

Operational Rules: For coding, set global rules like "Always comment complex logic" or "Use specific naming conventions."

Summary: Section 1

Next: Section 2 - Automating the Boring Stuff
