

Section 3: Zero to App

From Idea to Prototype: Using AI as your Lead Developer.

Setting Up the Canvas

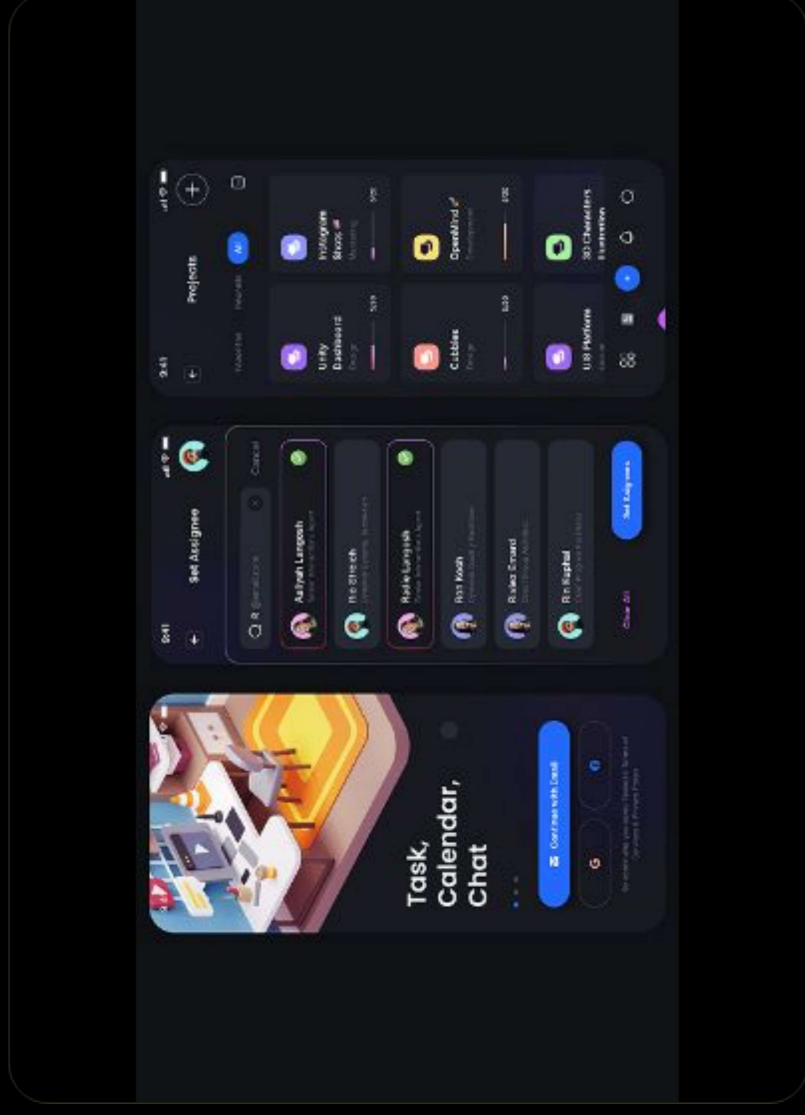

The Essentials Only

-  **VS Code:** Your digital cockpit for building.
-  **Flutter SDK:** The engine for cross-platform apps.
-  **AI Assistant:** Claude or ChatGPT as your mentor.

We skip the 100-page manuals. We install, we prompt, we build.

Prompting for UI/UX

Describe the Aesthetic

Don't just ask for a "button." Ask for a **Vibe**.

"Build a Study Buddy UI in Flutter. Use a deep charcoal background with neon lime accents. Use a thin, modern typography."

The Brain of the App

Pomodoro Logic

Use AI to handle the ticking timer and the 25/5 min cycle math.

Card Generation

Prompt the AI to allow user to add tasks.

State Management

Let AI manage how the screen updates when the timer hits

Visualizing the Flow

Connecting the Dots

When the user clicks "Start":

- 1. The UI triggers the Logic Layer.
- 2. The Timer begins the countdown.
- 3. The UI updates every second.
- 4. On zero, the alarm logic fires.

Section 3 Complete

Next: Section 4 - Debugging & Publishing
